Preface

This is the sixth annual report providing the results of the BRANZ Non-Residential Survey. BRANZ surveys builders and designers of non-residential buildings on the physical characteristics of the building. The purpose is to obtain data on non-residential buildings that is not available from official sources. This data includes what type of materials are used. The data is useful for studies in the fields of sustainability, energy efficiency, durability and engineering.

Acknowledgements

This work was funded by the Building Research Levy. We would like to thank all of the builders and designers who filled in the survey form and returned it to BRANZ.

Physical characteristics of new non-residential buildings 2020

BRANZ Study Report SR466

Abstract

Official data on the characteristics of non-residential buildings is limited. Building consent data held by Statistics New Zealand gives numbers by building type, value and floor area, aggregated into territorial authorities and regions. However, there is no data on materials used.

BRANZ began surveying builders and designers in 1998 to obtain data on materials used. We have since compiled a database of approximately 400 non-residential buildings per year containing information on the materials used by building component.

This report contains the results of these surveys on the materials used in new non-residential buildings. The aim is to provide information useful to building material manufacturers, retailers/wholesalers, builders, designers, researchers and government officials.

Keywords

Materials, building envelope, claddings, floors, framing, insulation.

1. Introduction

BRANZ surveys about 2,000 non-residential buildings per year in the BRANZ Non-Residential Survey. The survey also collects a variety of data on materials used in new and altered residential buildings.

The survey is a postal survey to the builder or designer identified on the building consent application form, and the questions relate to each individual consent. Generally, 400 returns are received each year. An incentive is offered (a Lotto ticket or book voucher) for the return of each survey form.

The consent information is obtained from the Whats On[1] building consent data. BRANZ uses this to determine a sample of non-residential buildings for each period from 31 territorial authorities. The territorial authorities surveyed are:

Auckland	Christchurch	Dunedin	Franklin
Far North	Gisborne	Hutt City	Hamilton
Invercargill	Kapiti	Manukau	Marlborough
Napier	New Plymouth	North Shore	Porirua
Palmerston North	Queenstown	Rodney	Southland
Tauranga	Thames-Coromandel	Tasman	Waikato
Waipa	Wellington	Western Bay of Plenty	Whangarei
Waitakere			

The survey form is constantly evolving to include new questions as required. However, it is important for BRANZ to keep the survey form as simple, concise and clear as possible. Therefore, BRANZ keeps the survey form to a single page.

BRANZ weights the responses by the share of building activity for each building type in the calculation of the market share. This prevents some building types (such as farm buildings) from having a disproportionate share of the total market share should BRANZ receive a larger number of survey returns of one building type.

Using the data collected, representative estimates of the incidence and proportions of many different materials can be made. The components analysed are:

- roof claddings
- wall claddings
- main structure
- partition wall framing
- wall infill framing
- wall insulation
- ceiling insulation
- floor insulation.

[1] *Whats-On report (Monthly).* BCI New Zealand, Auckland, New Zealand.

A limitation of the survey is that it does not ask why certain materials are selected. This means that the report contains no commentary on why material trends might be changing.

The value of new non-residential consents is presented in

Figure 1 broken down into three different building types – institutional, commercial and industrial.

After a brief decline in 2019, the value of new non-residential consents has risen to levels similar to those seen in 2018.

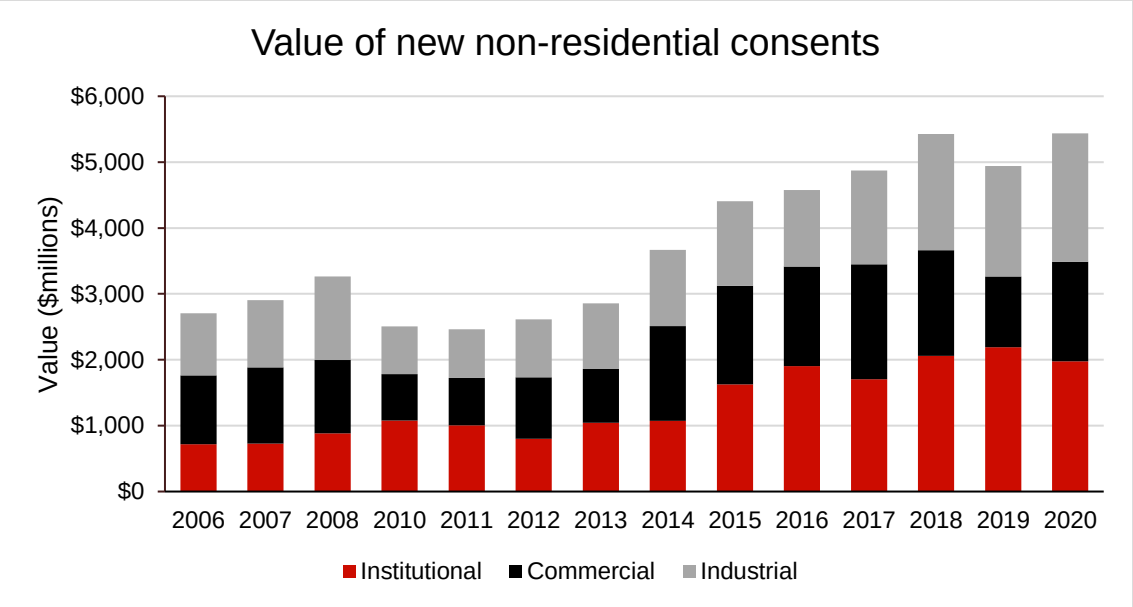

Figure 1. Value of new non-residential consents.

2. Summary

In general, many of the market shares of materials have been relatively steady over the years surveyed.

In 2020, partition wall framing market shares saw timber having a bounce-back year, increasing its market share for partition wall framing from 31% in 2019 to 57%. Steel remains the primary material for main structural framing. Steel and other metals are also the most common roof and wall cladding. Timber remains the most common material for infill framing – the framing between the main structural elements. Timber also experienced a large boost in use, rising from under 40% in 2019 to over 60% in 2020.

Steel, aluminium and other metals are the dominant wall cladding material, due to their dominance on industrial and farm buildings (Figure 3). Concrete (mainly precast panels) tends to be variable. After passing steel, aluminium and other materials in 2015, it is at its lowest level since 2010. The 'other' category decreased again in 2020 after a consistent climb upwards through 2015–2018.

For insulation, fibreglass is once again the most dominant category, overtaking the 'polyester and other' category for wall insulation. Polystyrene is still the most common insulation in insulated floors.

3. Main results

Key results are shown in the following charts. The data for these charts is in the tables in Appendix A.

Due to the variations in the mix of buildings year to year, market shares can be highly variable. Therefore, changes in share may be due to a change of building types rather than a change in preference for any particular building material.

3.1 Roof claddings

Sheet metal is still the dominant roof cladding for new non-residential buildings, even with a decrease in 2020 from 91% to 83% (Figure 2).

The 'other' category consists of membrane roofing, insulated panels and plastic film used on farm shelters. Use of plastic film on farm shelters has increased from 9% in 2019 to 17% in 2020 after a peak of 39% in 2016. Metal and concrete tiles are still relatively uncommon in non-residential buildings and barely feature in the 2020 results.

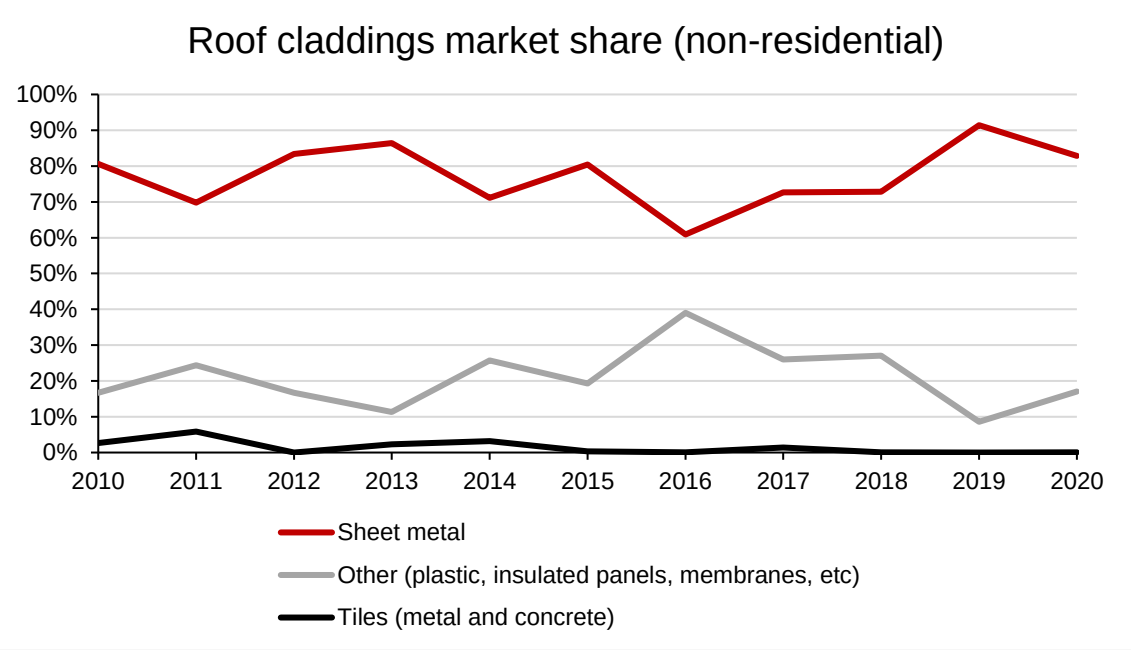

Figure 2. Roof claddings market share.

3.2 Wall claddings

Steel, aluminium and other metals are the dominant wall cladding material, due to their dominance on industrial and farm buildings (Figure 3).

Concrete (mainly precast panels) tends to be variable but has continued to drop since 2015. The 'other' category decreased again in 2020 after a consistent climb from 2015–2018.

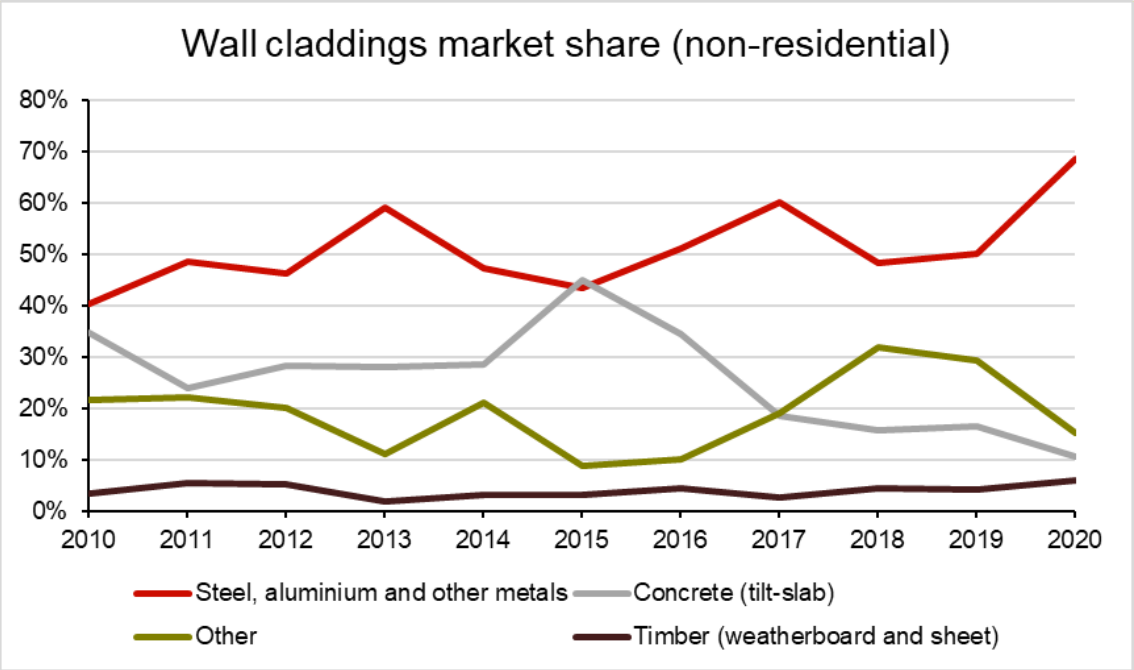

Figure 3. Wall claddings market share.

3.3 Main structure

Use of steel in main structural frames decreased in 2020, back to its 2018 share (Figure 4).

Concrete has remained at 14%, and timber framing increased its market share in 2020 to 27% from 18% in 2019.

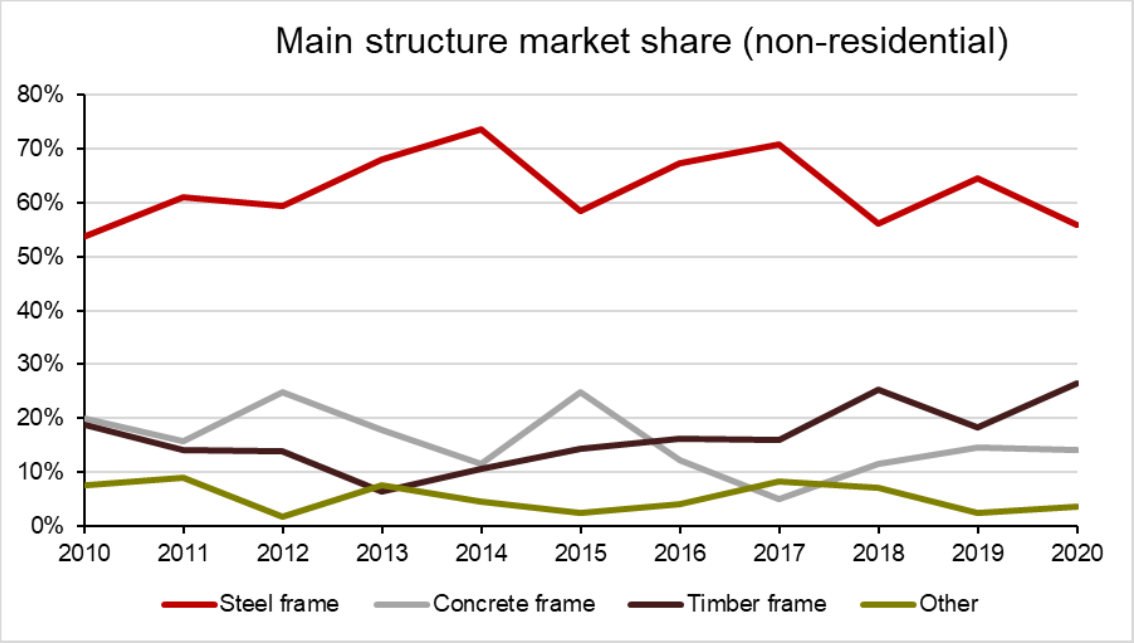

Figure 4. Main structure market share.

3.4 Wall infill framing

Wall infill framing is the framing between the main structural frames. Timber framing remains the main material type for this application, with a significant increase in 2020 to 66% from 37% in 2019 and concrete and 'other' both decreasing. Steel is in second place with a slight decrease from 2019 (Figure 5). The 'other' category often includes glazing.

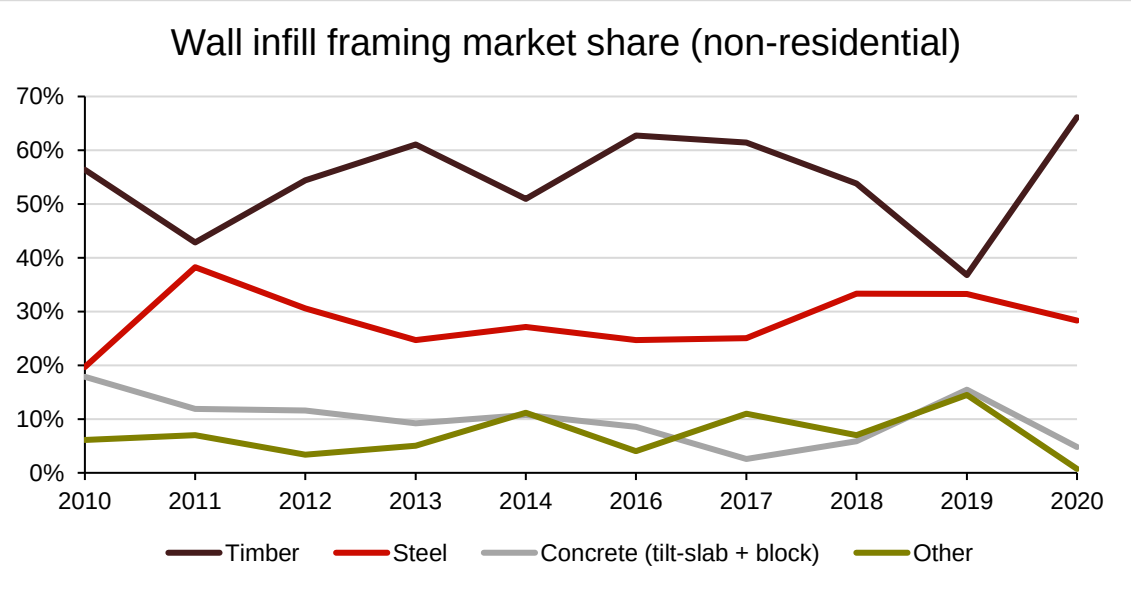

Figure 5. Wall infill framing market share.

3.5 Partition wall framing

Timber has increased its market share for partition wall framing from 31% in 2019 to 57%. The 'other' category includes insulated panels and glazing and has decreased from a 30% market share 2019 to a 14% share in 2020. Steel's market share dropped to 29% in 2020, down from 39% in 2019.

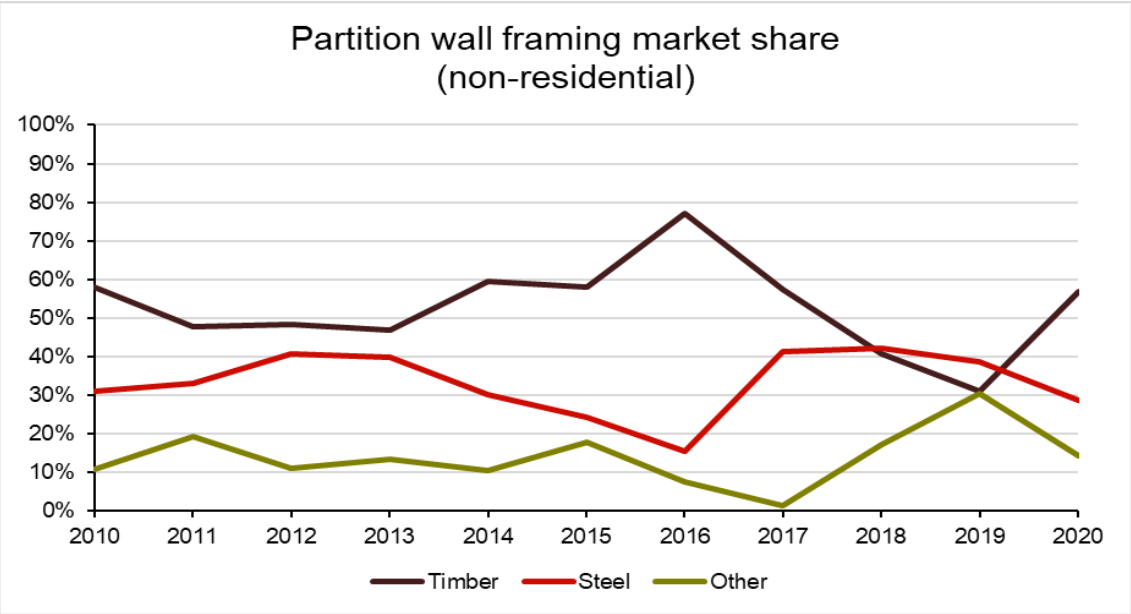

Figure 6. Partition wall framing market share.

3.6 Insulation

Wall insulation, ceiling insulation and floor insulation are dealt with separately in this section.

Farm buildings have not been included as it is uncommon for farm buildings to use insulation and they have a large share of the non-residential building market.

3.6.1 Wall insulation

Fibreglass is once again the dominant wall insulation material with a share of 68% after a brief drop in 2019 (Figure 7). The 'polyester and other' category now has a market share of 32%.

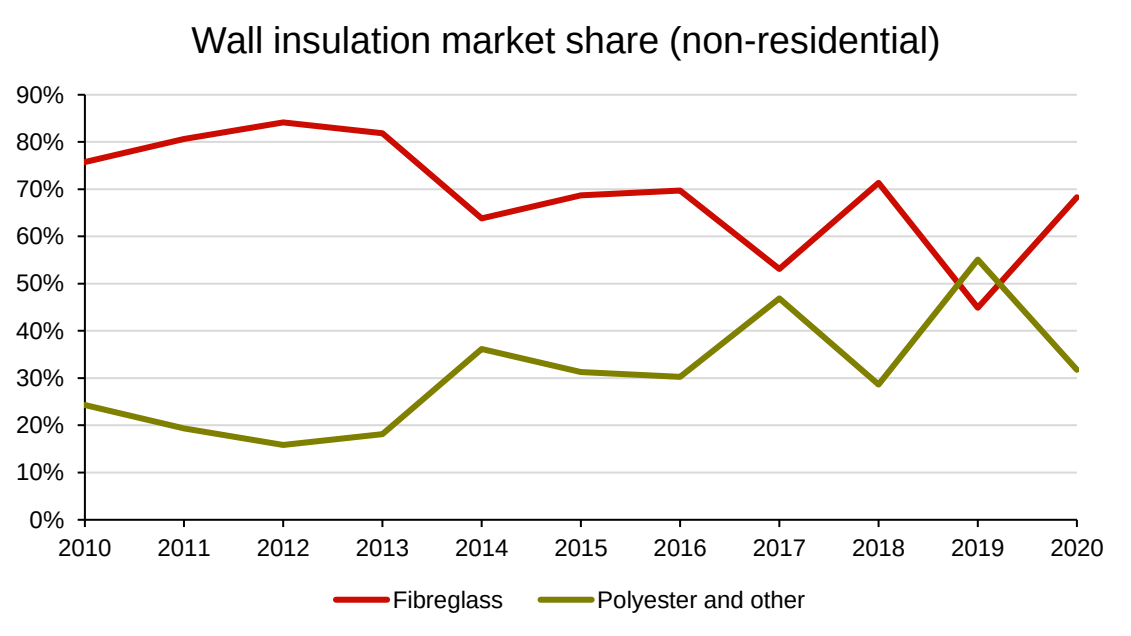

Figure 7. Wall insulation market share.

3.6.2 Ceiling insulation

Normally, most buildings use the same insulation material in the wall and ceiling, which means that market share in each market tends to follow the other.

Fibreglass remains the dominant insulation material with an increase to 76% in 2020 with the 'polyester and other' category decreasing to a similar level to 2012 (Figure 8).

'Other' primarily consists of polystyrene, which is common as part of insulated panels in industrial buildings.

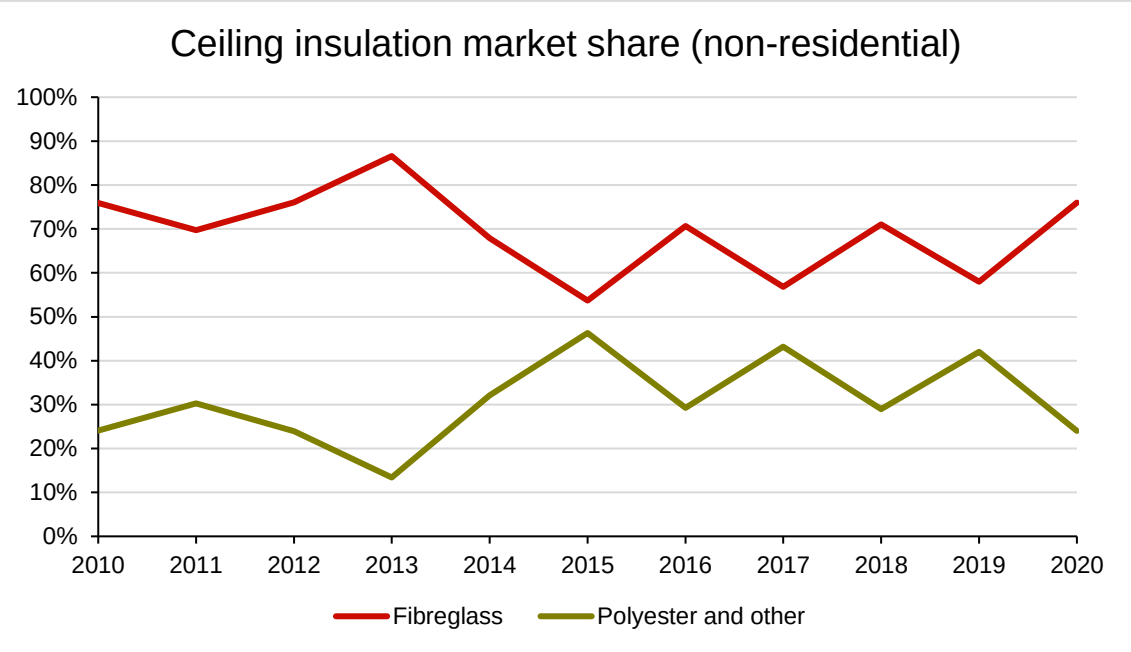

Figure 8. Ceiling insulation market share.

3.6.3 Floor insulation

For those buildings with floor insulation, sheet polystyrene is the still the most common floor insulation material (Figure 9).

Note that the question on insulation of concrete slabs was changed in 2015. This chart assumes that all buildings that selected underslab full/partial used sheet polystyrene, although non-polystyrene waffle pod systems have entered the market.

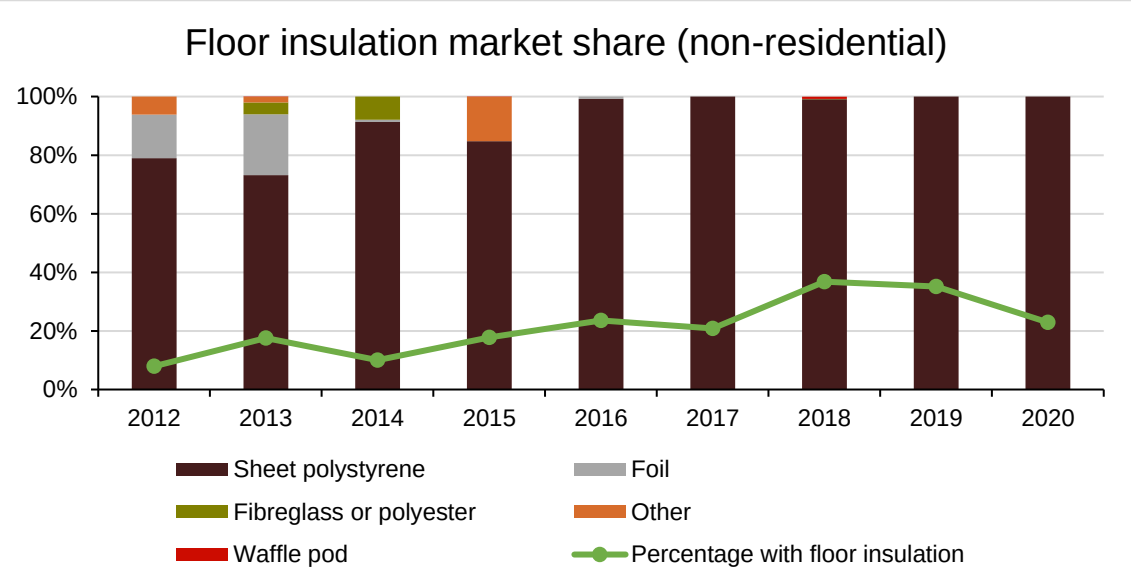

Figure 9. Floor insulation.

Are any prefabricated components used? **Yes / No** If yes, describe applicable component(s) below:

Prefab Frame ..... **Prefab Floors** .....
Prefab Walls ..... **Prefab Other** .....

Insulation

(tick one or more)	None	Pink Batts	Bradford Gold	Bradford Premier	Knauf Earthwool	Autex Greenstuf	Other Polyester	Wool	Polystyrene	Other (state)
Wall insulation	☐	☐	☐	☐	☐	☐	☐	☐	☐	.....
Ceiling insulation	☐	☐	☐	☐	☐	☐	☐	☐	☐	.....

Concrete slab insulation **Timber sub-floor insulation**

	Underslab full/partial	Perimeter edge	Under footing	Polystyrene	Polyester	Glasswool	Foil
Floor insulation	☐	☐	☐	☐	☐	☐	☐

Insulation Installer (name) Builder ☐ **Other (please specify)** ☐ .....

Building Wraps

	Flamestop	Bitumac	Tyvek Supro	CoverTek	Thermakraft	Fastwrap	Pauloid	Other (state)
Roof Wrap	☐	☐	☐	☐	☐	☐	☐	☐ .....

(tick one or more)	Bitumac	Tyvek Homewra	Watergate	Covertek	Thermakraft	Tekton	Fastwrap	Pauloid	Ecoply Barrier	Other (state)
Wall Wrap	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Wall Cladding State type and approximate % wall coverage

e.g. Concrete block, 75% Clay Brick, 15% Cedar WB, 10%

Other examples include: tilt slab, concrete block, steel zincalum, glazing, alumunium, radiata WB, linea WB etc.

Type ..... % area .....
Type ..... % area .....
Type ..... % area .....

If Fibre Cement product, what is it used as? (circle one) Applied texture finish sheet, Flat sheet, FC plank (7.5mm), Linea (16mm)

Wet Area Linings (bathroom, kitchen, laundry etc)

Please state the approximate square metres used

Formica Aquapanel	Seratone	Villaboard	Hardiglaze	GIB	Aqualine	Other	(state)
m²	m²	m²	m²	m²	m²	m²	.....

Spouting

What profile is the SPOUTING?

¼ round/quad ☐ ½ round ☐ Old gothic ☐ Box ☐ Other (state) .....

What material is the SPOUTING?

PVC (White) ☐ PVC (Colour) ☐ Steel ☐ Aluminium ☐ Copper ☐ Other (state) .....

Who installed the SPOUTING?

Roofer ☐ Spouting installer ☐ Builder ☐ Plumber ☐ Other (state) .....

Downpipes

What profile are the DOWNPIPES?

65mm round ☐ 80mm round ☐ 100mm round ☐ 65x50mm rectangular ☐ 100x50mm rectangular ☐
Other (state) .....

What material are the DOWNPIPES?

PVC (White) ☐ PVC (Colour) ☐ Steel ☐ Aluminium ☐ Copper ☐ Other (state) .....

Who installed the DOWNPIPES?

Roofer ☐ Spouting installer ☐ Builder ☐ Plumber ☐ Other (state) .....

Roof Cladding (only applicape if there is new roof cladding)

What roof cladding was used? (circle one or state below)

metal tiles, prepainted corrugated, trough zincalum, other steel profiles, concrete tiles, butyl, asphalt shingles, other (state) ..... **Approx. Roof Area:** ..... sqm

Type of roof structure Timber ☐ Steel ☐ Concrete Slab ☐

Thank you. Please fold this form, and freepost it in the return envelope Oct-15
