Preface

This is the 11th annual report providing the results of the BRANZ New Dwellings Survey. BRANZ surveys builders of new dwellings on the physical characteristics of their buildings. The purpose is to obtain data on new housing that is not available from official sources. This data includes generic types of materials used by building components as well as design information such as number of floors, prefabrication and efficiency measures. The data is useful for studies in the fields of sustainability, energy efficiency, durability and engineering.

Acknowledgements

We would like to thank all of the builders and designers who filled in the survey form and returned it to BRANZ.

Physical characteristics of new houses 2021

Abstract

Official data on the characteristics of new housing is very limited. Building consents data held by Stats NZ gives numbers by building type, value and floor area, aggregated into territorial authorities. However, there is no data on materials used or housing characteristics beyond the floor area.

The BRANZ New Dwellings Survey dates to 1998 and is responsible for collecting data on materials used in new housing. We have since compiled a database of approximately 1,200 new houses per year containing information on the materials used by building component and design arrangements.

This report contains the results of those surveys on the materials used in new housing. It updates previous data with the inclusion of the 2021 data set. The aim is to provide information useful to building material manufacturers, retailers/wholesalers, builders, designers, researchers and government officials.

Keywords

Materials, building envelope, claddings, floors, framing, insulation.

1. Introduction

BRANZ surveys 5,000 new residential buildings per year in the BRANZ New Dwellings Survey. This survey series started in 1998 and collects a variety of data on materials used in new housing.

The survey is a postal survey sent to the builder or designer identified on the building consent application form, and the questions relate to each individual consent. Generally, over 1,200 returns are received each year. An incentive is offered (a Lotto ticket or book voucher) for the return of each survey form.

The consent information is obtained from the Whats On[1] building consent data. BRANZ uses this to determine a sample of new dwellings for each period from 31 territorial authorities. The territorial authorities surveyed are:

Auckland	Christchurch	Dunedin	Franklin
Far North	Gisborne	Hutt City	Hamilton
Invercargill	Kapiti	Manukau	Marlborough
Napier	New Plymouth	North Shore	Porirua
Palmerston North	Queenstown	Rodney	Southland
Tauranga	Thames-Coromandel	Tasman	Waikato
Waipa	Wellington	Western Bay of Plenty	Whangarei
Waitakere			

The survey form is constantly evolving to include new questions as required. However, it is important for BRANZ to keep the survey form as simple, concise and clear as possible. Therefore, BRANZ keeps the survey form to a single page.

BRANZ weights the responses by share of building activity in each territorial authority (as indicated by building consents) in the calculation of the national market share. This prevents some territorial authorities from having a disproportionate share of the total market share should BRANZ receive a larger number of surveys return from one particular area. The results presented are only for new houses (i.e., single detached units). Using the data collected, representative estimates of the incidence and proportions of many different materials can be made. The components analysed are:

- roof claddings
- wall claddings
- wall framing
- number of storeys
- flooring
- floor joists
- insulation.

[1] *Whats On report (Monthly).* BCI New Zealand, Auckland, New Zealand.

A limitation of the survey is that it does not ask why certain materials are selected. This means that the report contains no commentary on why material trends might be changing. It is also subject to sampling noise, which can cause short-term fluctuations that are at variance to long-term trends.

The average floor areas since 2007 are presented in Figure 1 to illustrate any bias that may be present in the results. The sample average floor area for 2021 is much lower than the consent average floor area.

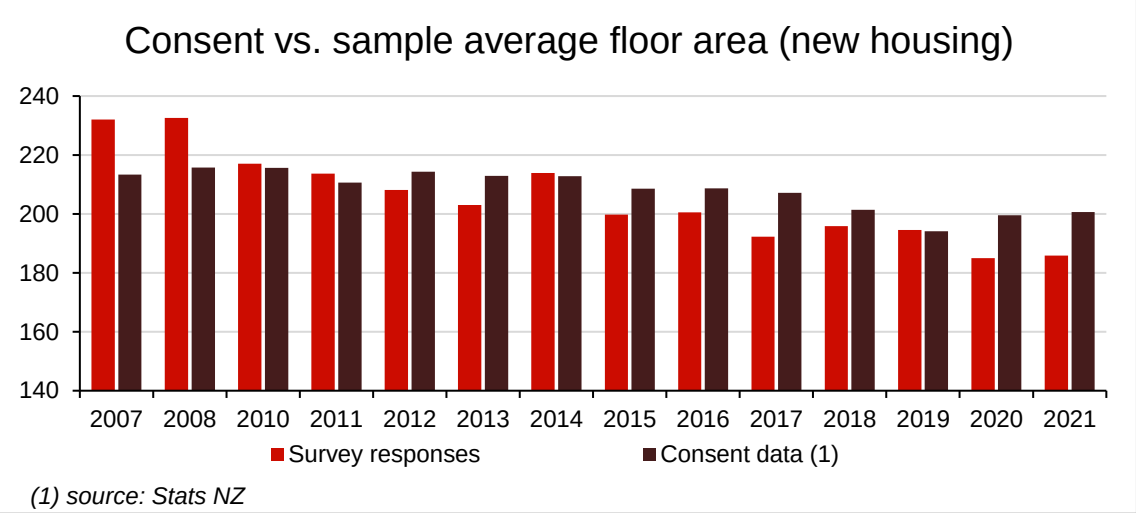

Figure 1. Consent versus sample average floor area.

Some questions change from survey to survey. However, most have remained the same since the start to ensure a consistent data set for comparative purposes.

2. Summary

In general, many of the market shares of materials have been relatively steady over the years surveyed. Notable material trends include the following:

- Steel roofing continues to be the predominant roof cladding option.
- The market share of weatherboard profiles has decreased. This is the lowest market share for weatherboard profiles since the creation of this survey. The 'other' category, which consists of metal, non-weatherboard fibre-cement, exterior insulation and finish systems (EIFS) and aerated autoclaved concrete (AAC) exterior cladding options, saw a slight increase in market share. Finish bricks (clay and concrete) saw the largest increase in market share.
- Timber framing continues to hold a high market share.

3. Main results

Key results are shown in the following charts. The data for these charts is in the tables in Appendix B.

3.1 Roof claddings

Sheet metal remains the dominant roof cladding material with its market share steadily trending upwards since 2012. The market share of sheet metal saw a significant increase in 2017 that has sustained through to 2021 (Figure 2).

The share of tiles (both metal and concrete) has declined in 2021, while the 'other' category slightly increased. The 'other' category mostly consists of shingle and membrane roofing products.

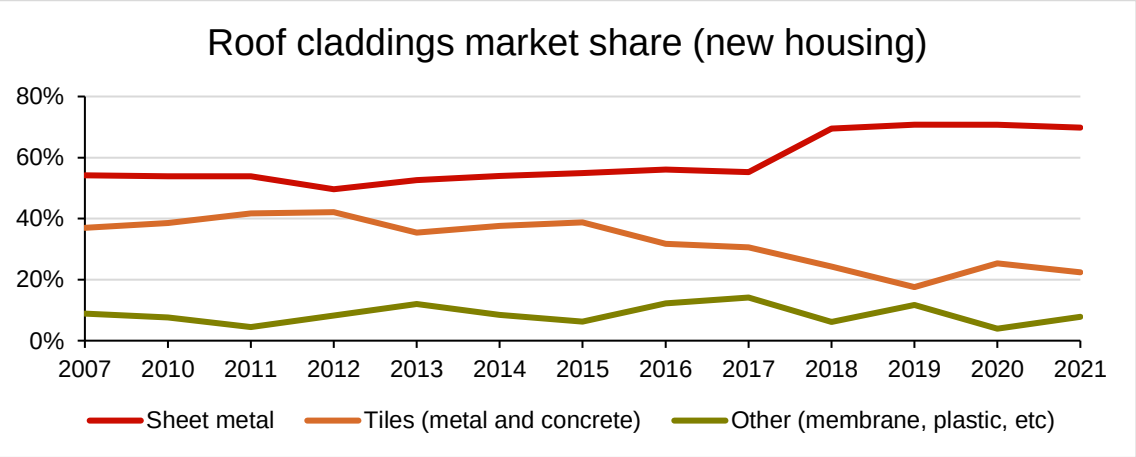

Figure 2. Roof claddings market share.

3.2 Wall claddings

Finish bricks (both clay and concrete) have increased in use for the first time since 2013 (Figure 3) and are now higher than both the 'other' and weatherboard categories. Finish bricks increased from a market share of 22.2% in 2020 to 37% in 2021.

Weatherboard profiles have decreased to 26% in 2021 from 41% in 2020. Timber makes up nearly three-quarters of the surveyed weatherboard profiles while the remainder consisted of fibre-cement and uPVC.

Major constituents of the 'other' category are metal, non-weatherboard fibre-cement, EIFS and AAC.

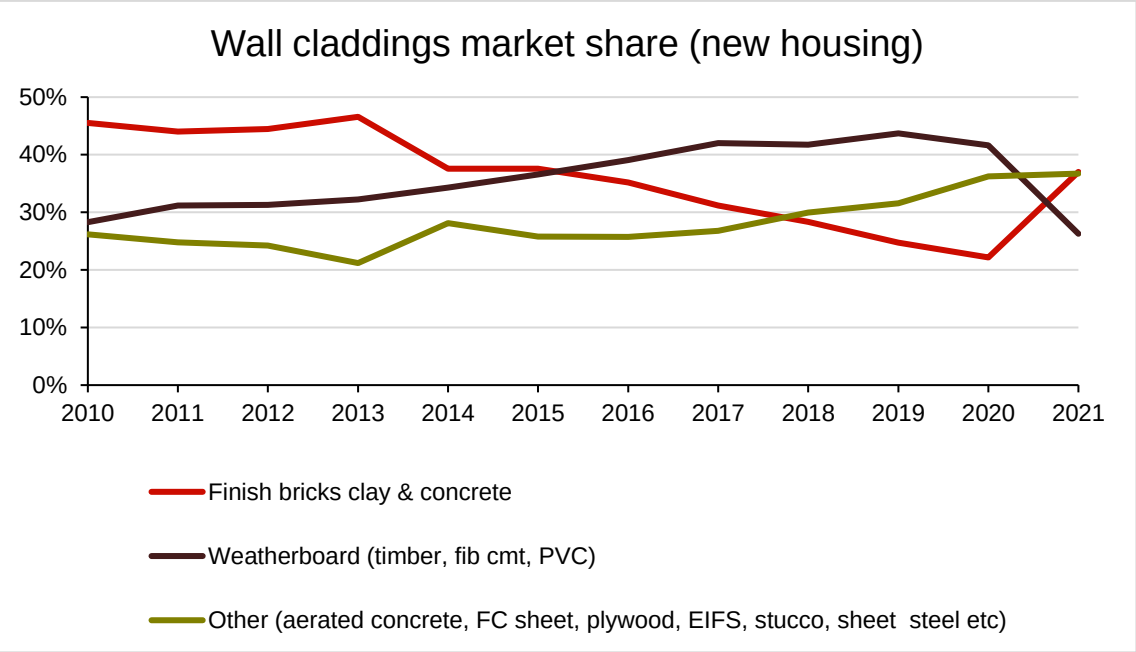

Figure 3. Wall claddings market share.

3.3 Wall framing

Timber framing remains the predominant structural material in new housing, with a historical market share of around 90% (Figure 4). Since 2018, the market share of timber framing has declined slightly. Meanwhile, since 2018, the use of concrete masonry, particularly for ground floors, has increased. Laminated veneer lumber (LVL) made up around 7% of timber framing.

The majority (92.5%) of wall framing is precut or prenailed.

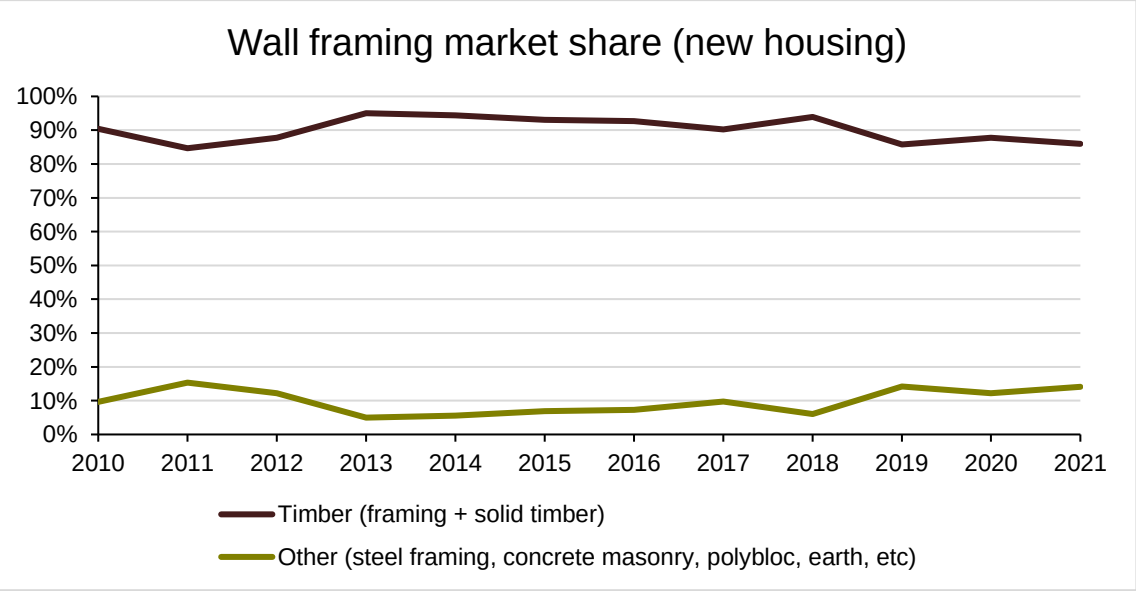

Figure 4. Wall framing market share.

3.4 Number of storeys

Figure 5 shows the proportion of new houses that were single storey, 2 storey or 3 or more storeys. Analysis was restricted to the 29 territorial authorities where we received four or more responses. The number in brackets beside the name of the territorial authority is the number of responses received. Notably, the greatest proportion of new houses built with 2 or more storeys were generally reported in areas with the higher land prices such as Central Auckland, North Shore and Wellington. This reflects that higher land prices encourage greater intensity of development. Steeper terrain may also encourage multi-storey development – for example, in the case of Wellington.

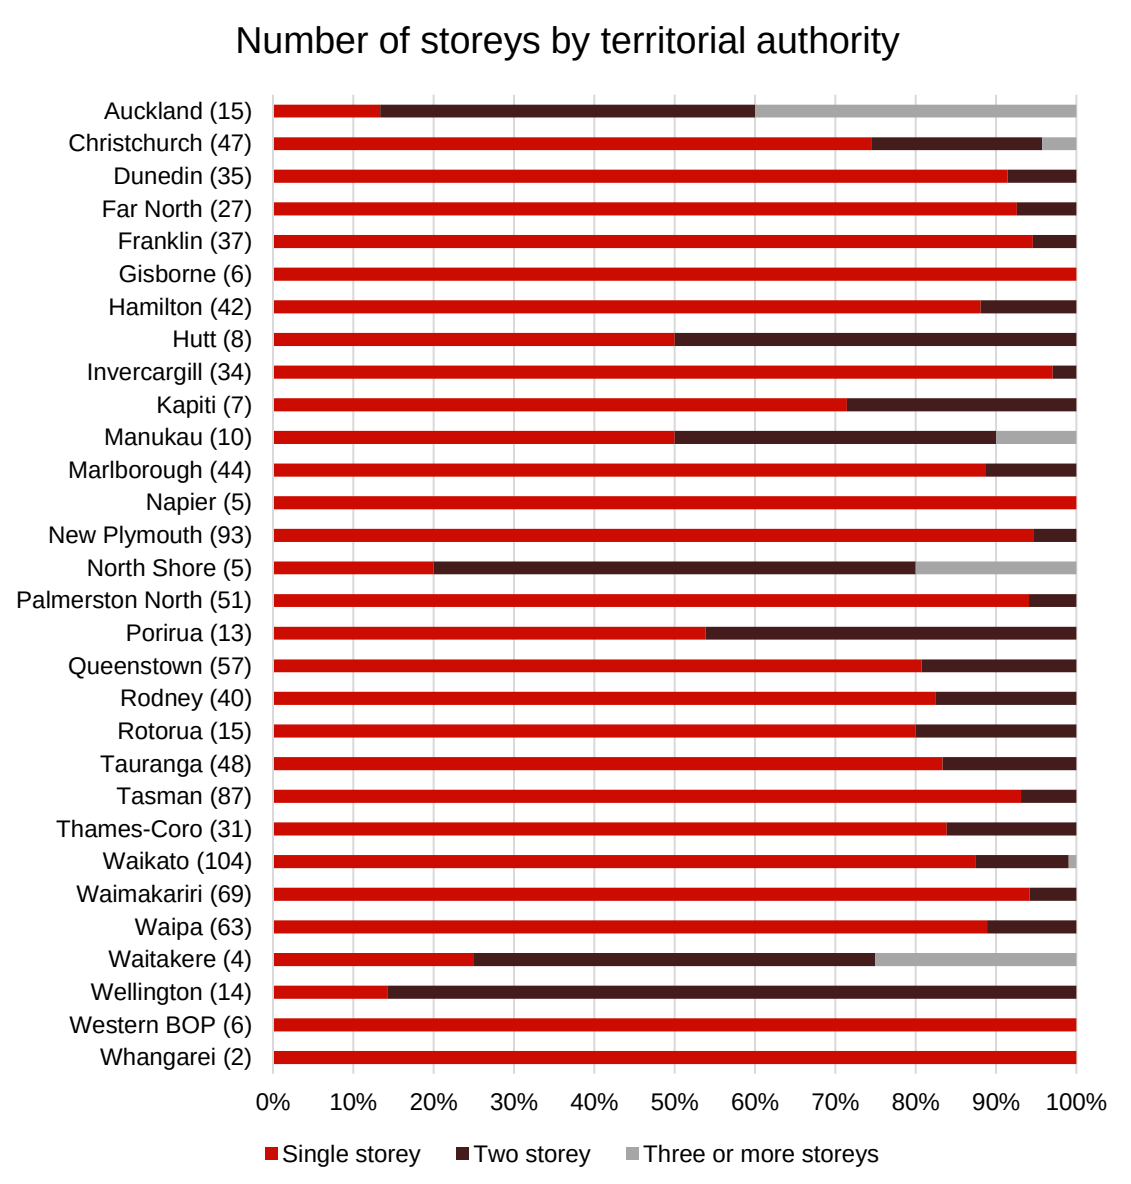

Figure 5. Number of storeys by territorial authority.

3.5 Flooring

Concrete flooring remains the most popular flooring option in new housing (Figure 6). The market share of 'all other flooring' decreased slightly 2021 and consists mostly of particleboard and strand board.

The percentages include upper floors (usually wood based) so are impacted by the trend towards multi-storey buildings, which made up 30% of new dwellings in 2021.

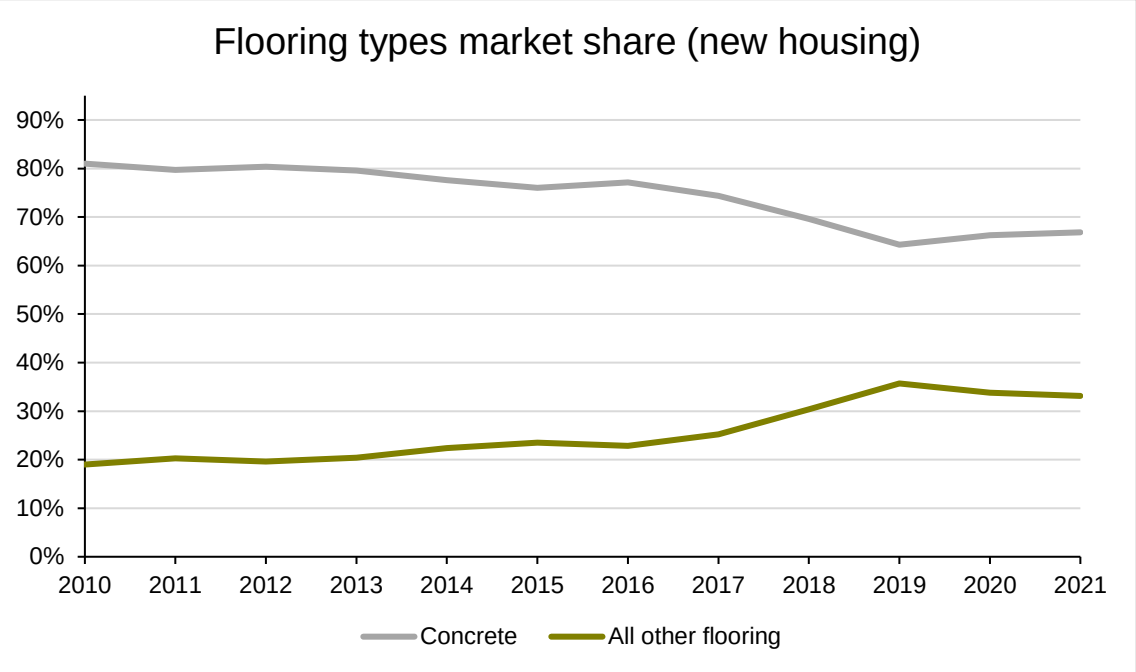

Figure 6. Flooring types market share.

3.6 Floor joists

The market share of solid timber floor joists decreased slightly from 75% in 2020 to 69% in 2021. The 'other' category increased from 25% in 2020 to 31% in 2021 (Figure 7). The 'other' category primarily consists of various proprietary wood and steel composite joists and traditional heavy-gauge steel joists.

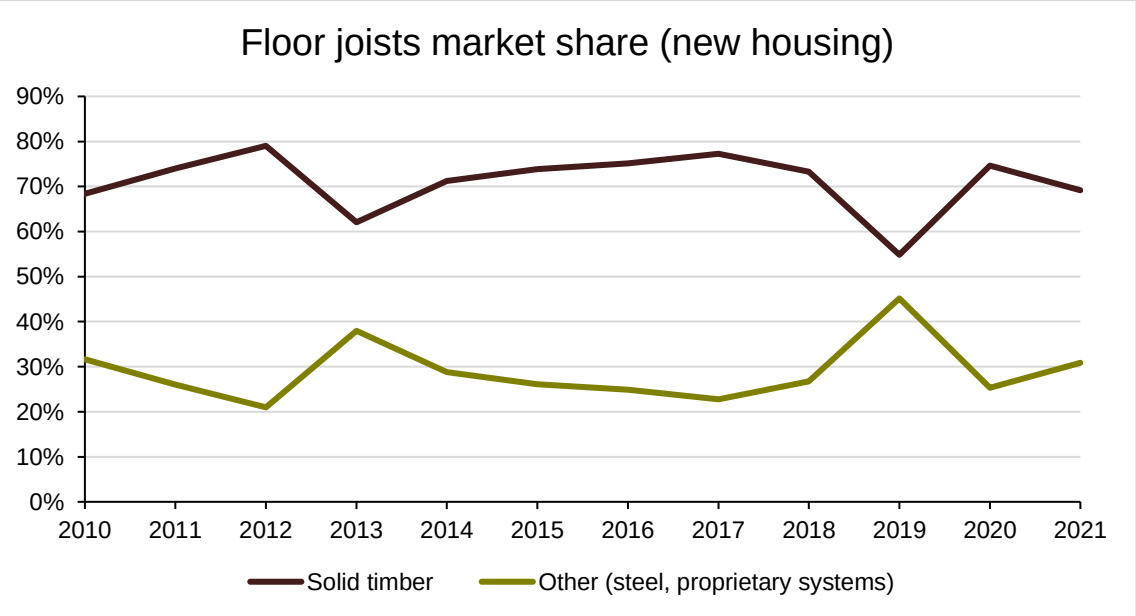

Figure 7. Floor joists market share.

3.7 Insulation

Wall insulation, ceiling insulation and floor insulation for concrete slabs and timber floors are dealt with separately in this section.

3.7.1 Wall insulation

Fibreglass continues to be the predominant wall insulation material (Figure 8). Despite this, the market share of fibreglass is at its lowest since this survey was launched into the field. In 2021, the 'other' category has increased to 16% of the market share and mainly consists of alternative polyester options.

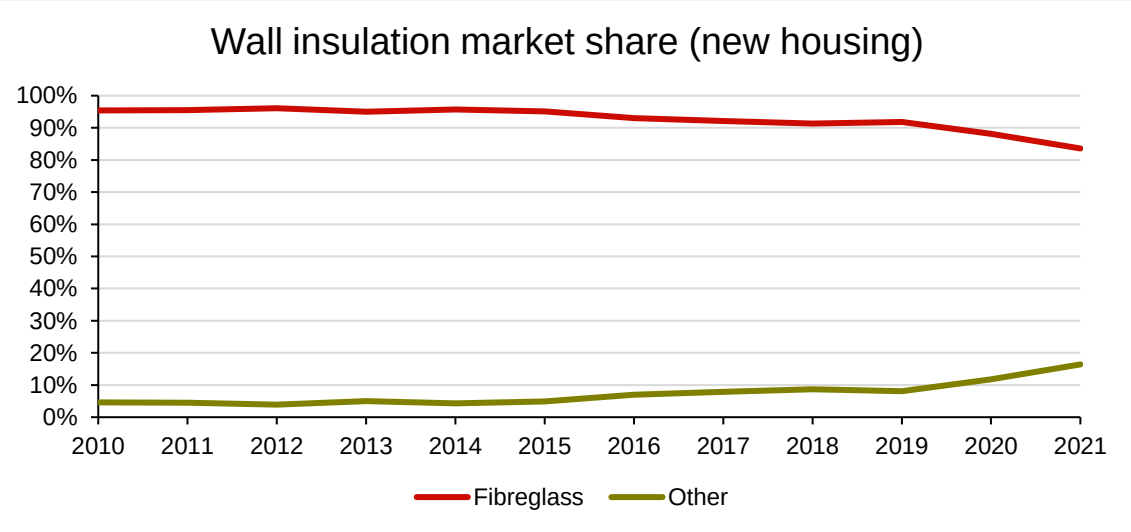

Figure 8. Wall insulation market share.

3.7.2 Ceiling insulation

Fibreglass continues to be the predominant ceiling insulation material (Figure 9). It is common for builders to use the same type of material (often the same brand) for walls and ceilings, so market shares for wall and ceiling insulation tend to move together. Despite the continued dominance of fibreglass, it has declined steadily since 2016 as other options (primarily polyester) have grown in popularity.

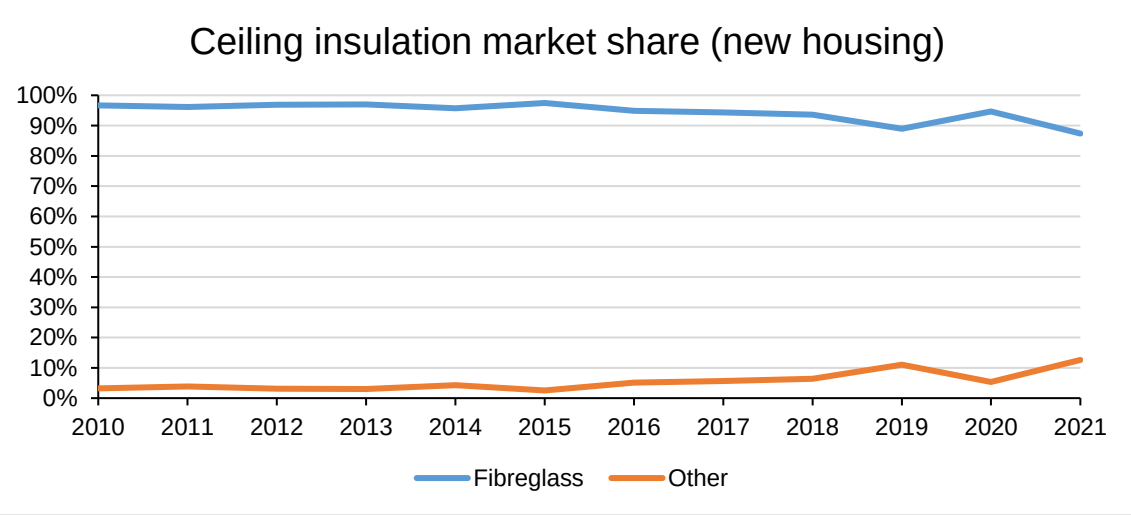

Figure 9. Ceiling insulation market share.

3.7.3 Floor insulation

In 2015, the question on insulation of concrete slabs was changed. We presented the mix of insulation types used in 2015 against total insulation for the historical series in Figure 10. It will take further data with the new question to establish a trend for this series as the data is too inconsistent for any trends to become apparent. Underslab full/partial insulation is the most common insulation for concrete slabs in new housing. Very few builders reported insulating the perimeter edge or under the slab footing.

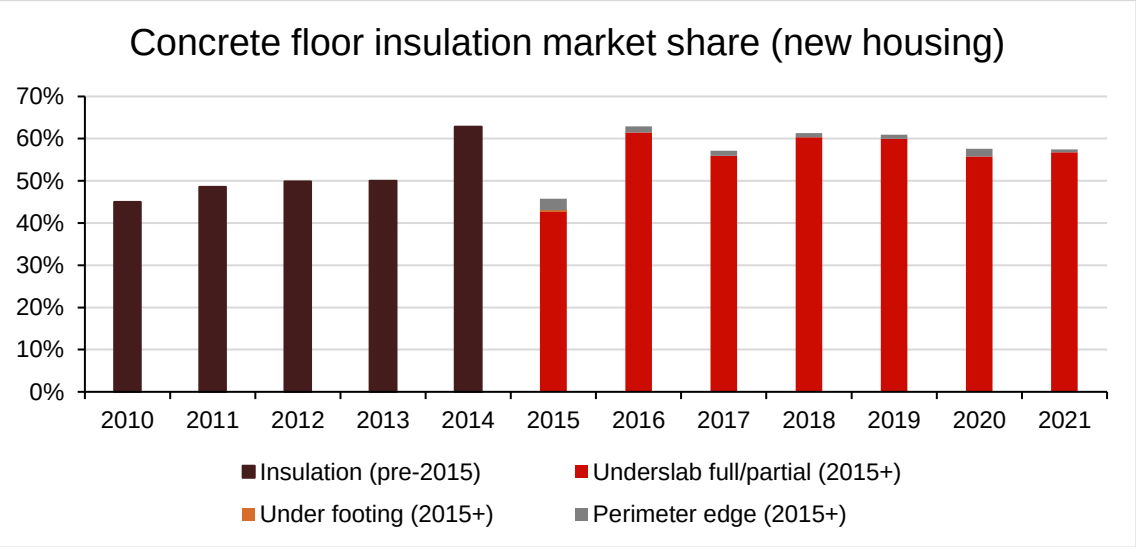

Figure 10. Concrete slab insulation.

Timber subfloors are much less common than concrete slabs in new housing so the shares presented in Figure 11 are susceptible to large swings given the limited use of timber floor insulation in new houses. Polystyrene remains the dominant timber floor insulation material followed by fibreglass and polyester. Meanwhile foil was non-existent as a timber floor insulator in 2018–2021 following a ban in 2016[2] and a trend of steady decline since 2014.

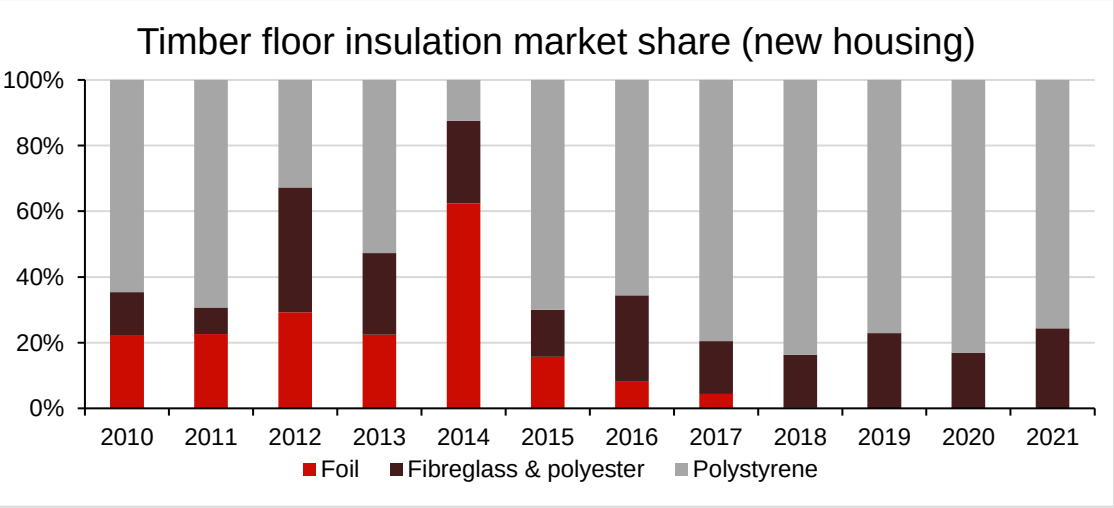

Figure 11. Timber floor insulation market share.

Appendix A: Survey forms

A.1 Survey form October 2006

NEW DWELLING

Please give this form to the builder or designer to fill out for the building consent listed over the page.

Number of dwelling units ☐ in this consent. Contract value of work (incl sub-trades) $ ..... incl GST.

Floor areas Total floor area _____ Sq metres (include attached garage, exclude decks).

	Particleboard	Plywood	Strip timber (not overlay, exclude decks).	Concrete
Ground level	_____ Sq metres	_____ Sq metres	_____ Sq metres	_____ Sq metres
First level	_____ Sq metres	_____ Sq metres	_____ Sq metres	_____ Sq metres
2nd or more levels	_____ Sq metres	_____ Sq metres	_____ Sq metres	_____ Sq metres

Decks (above ground, not concrete patios) (circle one)

Includes a deck ? Yes / No (circle one or more)

Deck area_____Sq metres Deck surface material = radiata/ hardwood/ butyl/ tiles/ other/ pour-on.

Deck substrate = plywood sht/ fibre cement sht/ concrete/ timber joists.

Wall Framing (tick appropriate box)

Radiata ☐ Steel ☐ Douglas fir ☐ Concrete block ☐ Other ☐ (state) .....

Was the wall framing precut or prenailed ? Yes / No (circle one)

Framing timber treatment

	Untreated kiln dry	Untreated wet	H1.2	T1.2 (orange)	H3.1
Tick one or more	☐	☐	☐	☐	☐
State where used (eg outer walls, sub floor, etc)	.....	.....	.....	.....	.....

Floor joists

	None	Solid timber	Posistrut	Hybeam (I beam)	Steel	Twinaplate	Origin (I beam)	Other (state)
Tick one or more	☐	☐	☐	☐	☐	☐	☐	☐
Joist depth mm	..... mm	..... mm	..... mm	..... mm	..... mm	..... mm	..... mm	..... mm

Insulation

(tick one or more)	R value of insulation	Pink Batts	Bradford Gold	Premier Fibreglass	Blown FG Rockwool	Greenstuf (polyester)	Other polyester	Treated paper	Wool	Other (state)
Wall insulation	R-	☐	☐	☐	☐	☐	☐	☐	☐	☐
Ceiling insulation	R-	☐	☐	☐	☐	☐	☐	☐	☐	☐

		Expol Warmfeet	Polystyrene panel	Cosy Floor	Sisalation Foil	Other (state)	
Floor insulation	R-	☐	☐	☐	☐	☐	.....

Installer (name) .....

Noise Control (circle one)

Have you installed noise control products? Yes / No What type? .....

Building wraps

	Flamestop	Thermakraft	Bitumac	GIB underlay	Greencap	Pauloid	Black Paper	Other (state)
Roof wrap	☐	☐	☐	☐	☐	☐	☐	☐

(tick one or more)	Flamestop	Tyvek	Thermakraft coverup	Framegard II	Greenwrap	Fastwrap	Black Paper	Other (state)
Wall wrap	☐	☐	☐	☐	☐	☐	☐	☐

Wall cladding State type (and approx % wall coverage)

Type ..... % area..... eg fibre cement sheet, 75% also plywood, solid plaster(min 18mm),

Type ..... % area..... clay brick, 15% plaster on polystyrene, concrete

Type ..... % area..... cedar 10% block, PVC weatherboard, etc.

	Hardies	BGC	CSR	PRIMA	Other
If yes to Fibre Cement cladding what is the Manufacturer? (tick one or more)	☐	☐	☐	☐	☐

Fibre Cement Product used as (Circle one or more) Applied texture finish sheet, Flat sheet, FC plank, FC weatherboard/Linea

If solid plaster, what backing? (circle one if solid plaster) fibre cement, plywood, paper, Triple S, block/brick, metal lathe

Roof cladding Type ..... (or circle one)

eg metal tiles, prepainted corrugated, other steel profiles, concrete tiles, butyl, asphalt shingles, fibreglass shingles, etc.

Wet wall linings (Tick one or more in each row)

	Formica Aquapanel	Seratone	Hardies Villaboard	Hardies Hardiglaze	Standard GB	GIB Aqualine	Other	(state)
Bathroom	☐	☐	☐	☐	☐	☐	☐	.....
Laundry	☐	☐	☐	☐	☐	☐	☐	.....

Is fibre cement sheet flooring underlay used in the bathroom or laundry? Yes/ No (circle one).

Energy efficiency Tick if any of the following are being installed:

Double glazing	Solar water heaters	Dual flush toilets	Energy efficient lights	Heat pump	Low flow showers	Built-in window vents
☐	☐	☐	☐	☐	☐	☐

Type of Builder How many houses or dwelling units does your company build per year (approx) . .....

Construction Delays

If you signed a contract with the owner now, how many weeks before on-site work would start? .....wks

Thank You. Please fold this form, and freepost it in the return envelope Oct-06
